EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Kocovsky, Jr. on June 6, 2009.

The application has been amended as follows:

Claim 8:

A closure device for a container, comprising:

- a filling device that can be attached to an opening of the container;
- a closure means that is attached to the filling device in such a way that the opening of the container is sealed if the filling device is attached to the opening and which closure means is at least partially coated with polytetrafluoroethylene on one side that is accessible from outside the container in the assembled state of the filling device on the container, the closure means comprising:
 - a closure structure formed of soft material having good adhesive properties; and
 - a needle guide that encloses the closure structure and a portion of a needle tip receiving side of the closure structure, the needle guide being formed of a hard material, the needle guide defining a funnel-

shaped opening which directs the needle tip toward the closure structure;

a collecting space below the closure structure for receiving a fluid that can be introduced into the collecting space through the closure means.

Claim 13:

A closure device which closes an opening of a point of care testing container which receives bodily fluids via a needle and which testing container is configured to be received in a point of care testing device, the closure device comprising:

- a structure which defined a collecting space for receiving the bodily fluid;
- a connecting structure which extends from the collecting space defining structure, the connecting structure being configured to connect with the opening of the point of care testing container;
- a closure structure which closes an end of the collecting space opposite to the connecting structure, the closure structure being located above the collecting space and configured to be penetrated by the needle to introduce fluid into the collecting space and to seal when the needle is withdrawn;
- a low wettability coating on at least a portion of the closure structure which inhibits body fluid which escapes from the needle tip from spattering on the device and inhibits the body fluid from escaping from the collection space.

Claim 15:

A closure device comprising:

- a structure that defines a fluid collecting space;
- a connecting structure that extends from and defines an outlet to the fluid collecting space, the connecting structure being configured to be connected to an opening of a container such that fluid drains from the collecting space into the container;
- a closure structure which closes an end of the fluid collecting space opposite to the connecting structure, wherein the closure structure is located above the fluid collecting space;
- a polytetrafluoroethylene coating on at least a portion of the surface of the closure structure opposite to the fluid collecting space;
- wherein the closure structure and the polytetrafluoroethylene coating are configured to be penetrated by a tip of a needle which delivers the fluid into the fluid collecting space through the closure structure and the polytetrafluoroethylene coating and to seal against the fluid leaving the fluid collecting space ~~through the closure structure and the polytetrafluoroethylene coating.~~

2. The following is an examiner's statement of reasons for allowance: Applicant's arguments filed on May 12, 2009 are found to be persuasive. Specifically, Applicant

asserts that there is no teaching or suggestion in the references of record to raise the septum 73A (see Fig. 6B) of Smith (US 2002/0130100) in order to create the claimed collecting space that allows for collection of fluid that is introduced *through* the closure means. In addition, raising the septum 73A would not result in a *collecting* space in the closure device because fluid would go straight into the container rather than being "collected." The Examiner's amendments above (changes are made on top of the claims filed in After-Final Amendment on May 12, 2009) clarifies that the collecting space is located below the closure structure (or that the closure structure is located above the collecting space), thus fluid is introduced into the collecting space *through* the closure structure. The amendment distinguishes the current invention from prior art references of record. The drawing that best depicts the claimed invention is Fig. 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SUSAN SU whose telephone number is (571)270-3848. The examiner can normally be reached on M-F 8:30AM-6:00PM EST (alternate Fridays off).
